

Thank you for choosing our services for your UV eyelash extensions.

To ensure the longevity and quality of your extensions, it's essential to follow the aftercare instructions carefully.

The First 48 Hours: UV LED Lashes extensions are ultra-resistant, with no need to wait or avoid water. You can enjoy your new lashes immediately without worrying about water exposure.

No Rubbing: Do not rub your eyes or lashes, especially when washing your face.

Daily Gentle Cleansing: Use a gentle, oil-free cleanser to clean around the eye area. Do not use cotton wool as the fibres can get caught in the lashes.

No Mascara: Do not apply mascara on the extensions as it may weaken the adhesive and cause premature fall-out.

Comb: Use a clean spoolie brush to comb your lashes daily to prevent crisscrossing and tangling.

Touch-ups: Regular touch-up appointments every 3-4 weeks are recommended to maintain the look of your lashes.

What to Avoid? No Oils: Do not use oil-based products around the eyes as these can dissolve the adhesive.

If Irritation Occurs? Contact Us: If you experience irritation, itching or discomfort, please contact us immediately for a consultation.

Allergies: While we strive to ensure the safety and compatibility of our products, some individuals may experience allergic reactions to the materials used in eyelash extensions. We strongly recommend that you inform your technician of any history of allergic reactions prior to the procedure. The clinic is not responsible for any allergic reactions that may occur. In case of irritation or discomfort, please remove the extensions immediately and consult a healthcare professional

Acknowledgement - I have received the aftercare instructions for my UV eyelash extensions and understand the importance of following them to maintain the quality and longevity of my extensions. I understand that failure to follow these instructions may result in complications such as irritation, lash loss, or reduced longevity of the extensions
